Assignment-1 : Parallel Planes

1 PROBLEM

Find the distance between the two planes $(2\ 3\ 4)x = 4$ and $(4\ 6\ 8)x = 12$

2 EXPLANATION

If the two planes are of the form

$$n^T x = c_1 \qquad (2.0.1)$$

and

$$n^T x = c_2 \qquad (2.0.2)$$

Then the distance between the planes is given by :

$$\frac{|c_1 - c_2|}{\|\mathbf{n}\|} \qquad (2.0.3)$$

3 SOLUTION

So, the distance between the given planes is:

$$\frac{|4 - 6|}{\sqrt{2^2 + 3^2 + 4^2}} = \frac{2}{\sqrt{29}}$$
